Why trust AppSecure for your security needs?

Comprehensive security assessments

Surreptitiously deconstructs, scans, and spots all security gaps and assesses your security team's incident response and readiness posture.

Access detailed pen test report

Acquire in-depth, actionable insights into possible security threat pathways and prescriptive solutions for maintaining a solid SDLC.

Simulate hackers' perspectives

Replicate the ever-evolving hackers' techniques and methods to identify and exploit the vulnerabilities in your web app and bolster your security proactively.

Experience real-world scenario offensive web app penetration testing

Map your app's attack surface from an attacker's viewpoint to discover potential entry points and overlooked security flaws.

Round-the-clock support

24 x 7 support from elite security professionals for implementing and validating security fixes.

Unmatched Expertise

Leverage the services from the top bug bounty hunters and ethical hackers from Fortune 500 companies.

Testimonials

We have been relying on AppSecure Security to complement our in house red team to pentest many of our product releases, from UI components to API systems. I have been impressed with AppSecure.in team's deep expertise on the OWASP areas, and the team does quite a thorough job on each of the engagements and provide detailed and timely reports. The team is also very flexible to learn about new technologies quickly to do a great job pentesting in spite of limited documentation. I would recommend them to any team looking for additional capacity and expertise in pentesting.

It has been our pleasure to work with AppSecure because they make security a hassle-free process. The security team at AppSecure not only finds security loopholes but also provides detailed action plans to fix the vulnerabilities found in the system. The team members are highly passionate and show great support during the process. I definitely recommend AppSecure to anyone looking to up their security partners.

Mukund Tripathi
Director - Platform, Atlan

We have been working with AppSecure Security and the team has helped us to make sure that our security is never compromised. They do the testing very meticulously, and provide detailed reports and helps to make sure that the issues have been resolved. They patiently listens to all the needs and guides you appropriately through each vulnerability assessment and their remedial procedures. We highly recommend AppSecure for all security related services for products on web or mobile at scale.
